

Project number: 21046
Prepared by: ECC
Subject: Access appraisal

Date: 25th August 2021

File name: 21046 TN01

1 Introduction

1.1 Background

1.1.1 Lime Transport has been commissioned by Monmouthshire Housing Association (MHA) to prepare an access appraisal in support of a candidate site submission for residential development on land at Churchfields, Devauden, Monmouthshire.

1.1.2 The site location is shown in **Figure 1.1** below.

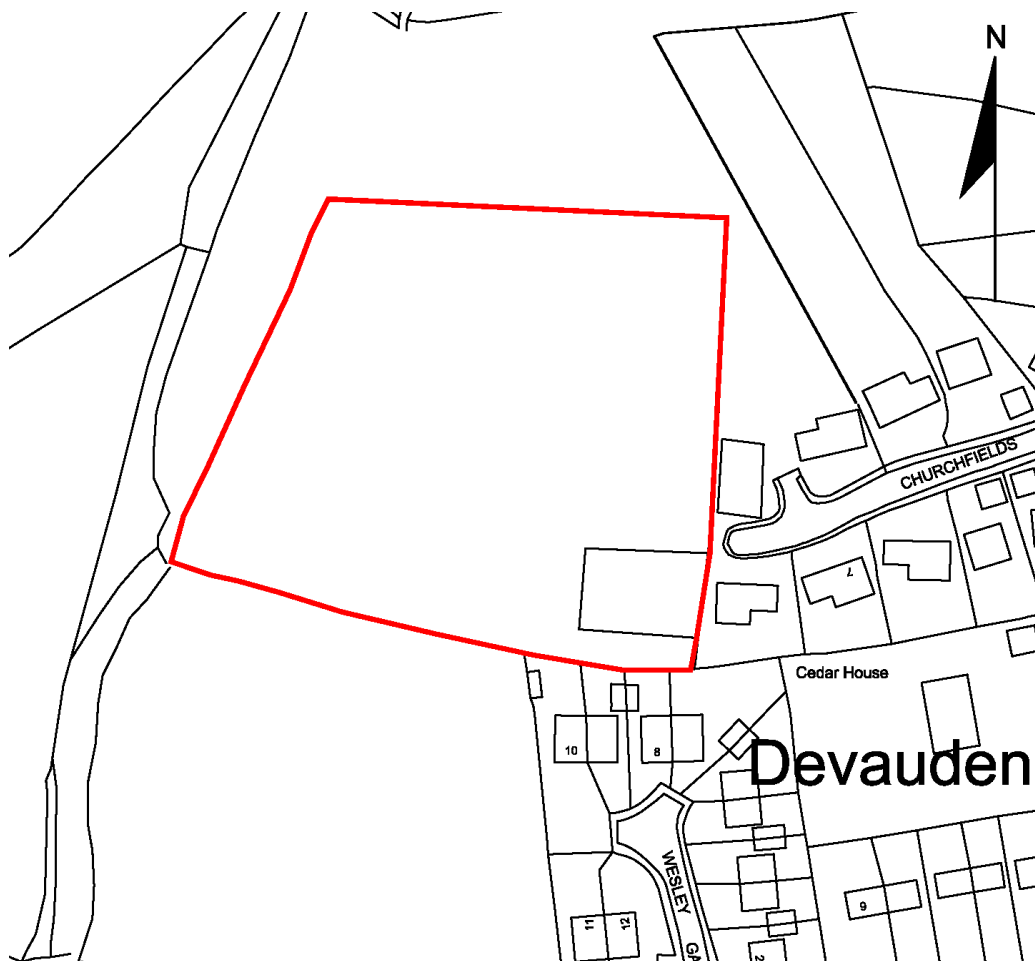

Figure 1.1 Site location

1.1.3 Based on a likely development density of 35 dwellings per hectare of net developable area, it is anticipated that the development site, of approximately 1.2 hectares, could accommodate up to 20 residential dwellings.

1.2 Purpose of report

1.2.1 The purpose of this report is to set out the connectivity of the site in terms of accessibility by walking, cycling and public transport to local facility and amenities, and sets out the most appropriate access arrangements to serve the proposed development, highlighting any highway improvement works or mitigation measures that may be required to support the development.

1.3 Structure of report

1.3.1 Following this introductory section, this report is structured as follows:

- Section 2 considers the sustainability of the site in terms of its location and access to local facilities and amenities;
- Section 3 considers the potential access arrangements;
- Section 4 predicts the likely travel characteristics for the proposed development, and describes the distribution of traffic across the highway network; and,
- Section 5 summaries the report.

2 Existing situation

2.1 Site location

2.1.1 The section of the report describes the site location, existing travel characteristics and access to facilities and amenities surrounding the development site.

2.1.2 The site is bounded by:

- Churchfields residential estate to the east;
- Residential dwellings fronting Wesley Way within the south-east corner of the development site; and
- Open space to the south, west and north.

2.1.3 The location of the development site together within the local highway network is shown in **Figure 2.1** below.

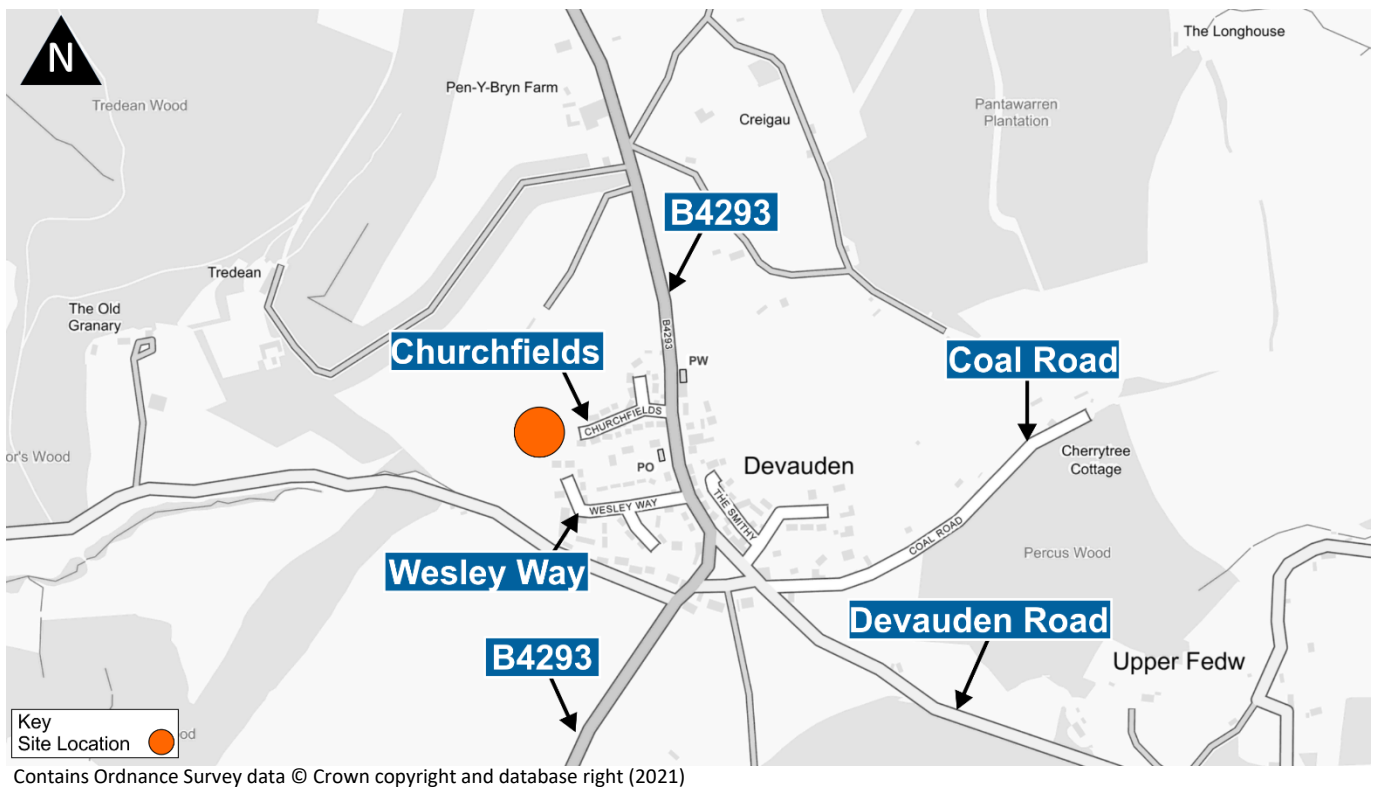

Figure 2.1 Local highway network

2.2 Travel characteristics

2.2.1 Travel characteristics of the existing population, including 'travel to work' and 'car ownership' statistics, have been obtained from the 2011 Census.

Travel to work

2.2.2 Lower super output areas are geographical areas built from contiguous output areas, which are consistent in population size. Between four and six output areas make up Lower Super Output Areas (LSOA), and between four and six LSOA make up Middle Super Output Areas (MSOA).

2.2.3 **Table 2.1** below sets out the travel to work data for people that live within Devauden and the surrounding area. This data sets out the travel to work mode split for those that live within the LSOA in which the site is located, the MSOA and Monmouthshire County Council as a whole. This data excludes those that work from home and those that are not in employment.

Table 2.1 Mode split for journey to work

	Mode split (%)		
	(007A LSAO)	(007 MSOA)	Monmouthshire
Train	2	3	2
Bus, minibus or coach	0	2	2
Motorcycle, scooter	1	1	1
Driving a car or van	82	80	76
Passenger in a car or van	4	4	6
Bicycle	1	1	1
On foot	8	8	11
Other	2	1	1

2.2.4 It can be seen from the table above that 82% of existing residents that live within the lower super output area, in which the site is located, travel to work by car (as driver), with a further 4% travelling as a passenger. It can also be seen that 11% of residents travel to work by sustainable modes, including walking, cycling and public transport.

2.2.5 Approximately 76% of those that live within Monmouthshire drive to work, which is lower than Devauden as a whole, reflecting the very rural nature of the development site.

Car ownership

2.2.6 The average car ownership rate for Monmouthshire as a whole is 1.45 vehicles per household. Within the LSOA, in which the site is located, the car ownership rate is higher, at 1.93 vehicles per household, which again reflects the very rural nature of the site.

2.3 Connectivity

Walking

2.3.1 The development site is accessible via Churchfields, which is a residential cul-de-sac with pedestrian footways on both sides of the carriageway and dropped kerbs and tactile paving at the junction with the B4293. The footways through Churchfields connect with the footway along the southern side of the B4293, through Devauden.

2.3.2 Even though there are limited pedestrian facilities within the vicinity of the site, there are a number of key desire lines for pedestrians of the development site, as set out below:

- Devauden post office and local store: 300m to the south-east;
- Petrol station with local store: 300m to the south-east;
- St James Church Devauden: 300m to the north-west;

- Bus stops located along the B4293: approximately 400m to the south-east or 400m to the north-east; and,
- The Hood Memorial Hall: 500m south-east.

2.3.3 It can be seen that the main pedestrian desire lines include facilities along the B4293, through Devauden, which are accessible from the site.

Cycling

2.3.4 The site benefits from being located within close proximity to National Cycle Network (NCN) 32, an on-road route along the B4293 which provides connections to Pen-y-cae-Mawr to the west and NCN 31, along the A466, to the east. NCN 31 provides on-road and off-road routes to Chepstow to the south.

2.3.5 The location of the NCN and local facilities within Devauden are shown in **Figure 2.3** below.

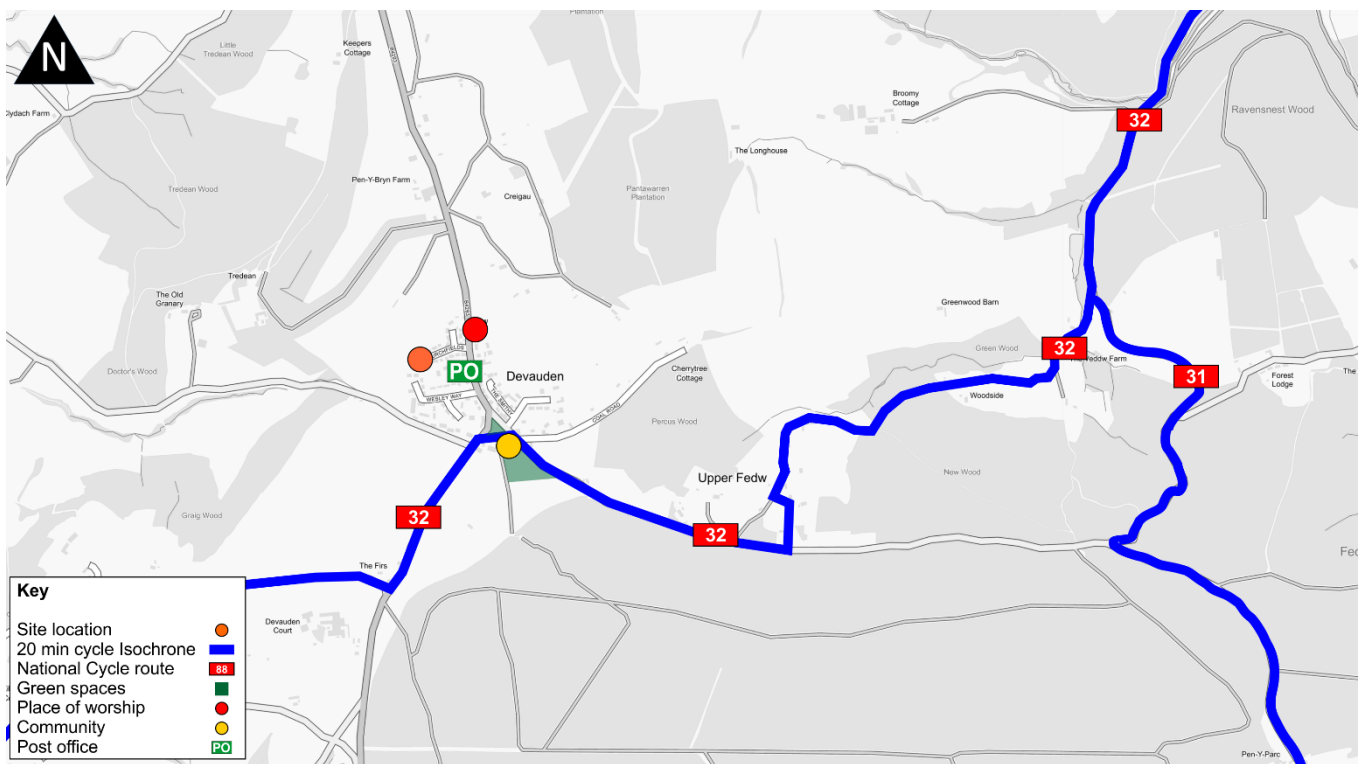

Figure 2.3 Local cycle network

2.3.6 Chepstow is located approximately 8km (easy cycling distance) south-east of the development site which is a well establish market town and offers a range of local facilities including a supermarket, convenience and comparison goods retail, post office, hairdressers, restaurants, cafes and take-aways.

2.4 Accessibility by public transport

Bus services

2.4.1 The closest bus stops are located on the B4293 to the east of the site, and are within 300m walk distance of the centre of the site.

2.4.2 The location of the closest bus stops to the site, together with the routes serving these stops is presented in **Figure 2.4** below.

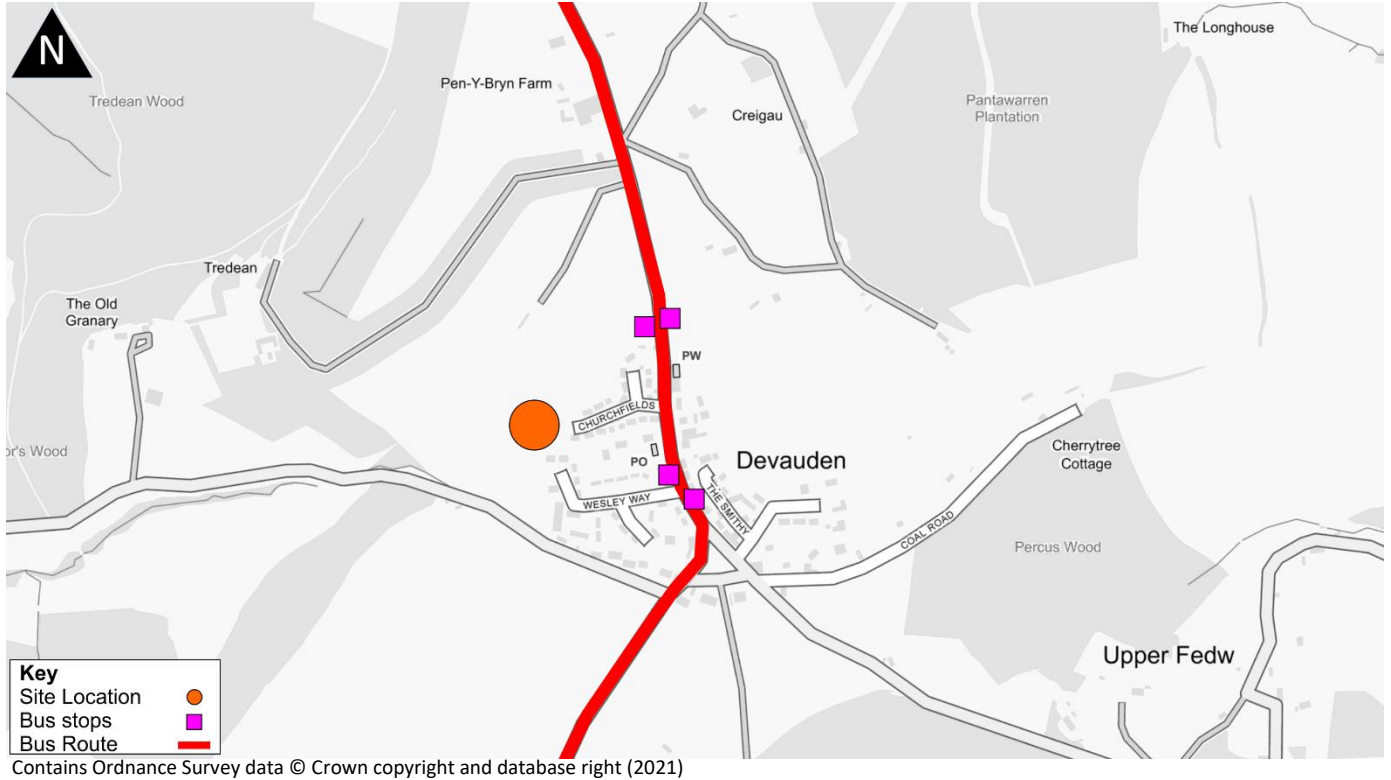

Figure 2.4 Bus routes in the vicinity of the site

2.4.3 **Table 2.2** below provides a breakdown of routes and frequencies of the services that call at the closest stops to the site.

Table 2.2 Bus routes and service frequencies

Route No.	Nearest bus stop to centre of site (m)	Route	Frequency (per hour) Monday -Friday and Saturday
B4293, Devauden			
65	300	Monmouth-Chepstow	One an hour 8am, 11am, 1pm. 3pm. 6pm
		Chepstow-Monmouth	One every other hour 7am-5pm

Rail services

2.4.4 Chepstow is the closest train station, located approximately 8km south-east of the development site, which is situated on the Gloucester to Newport line and managed by Transport for Wales.

2.4.5 The train station has a total of 11 car parking spaces, which are free to use for rail passengers. The station is accessible by bus route 65 which provides connections from Devauden to Chepstow throughout the day (with a total journey time of approximately 30 minutes).

2.4.6 Chepstow train station provides connections to Lydney and Gloucester to the north and to Newport, Cardiff, Pontyclun, Bridgend and Maesteg to the west. Approximately one train departs per hour (6am-11pm), with the following journey times:

- 30 minutes to Gloucester;
- 20 minutes to Newport;
- 30 minutes to Cardiff Central;
- 1 hour to Bridgend; and,
- 1 hours and 30 minutes to Maesteg.

2.5 Local highway network

2.5.1 A description of the local highway network within the study area is contained in **Table 2.3** below and shown in Figure 2.1 above.

Table 2.3 Local highway network

Description	
Churchfields	
Description	Residential cul-de-sac with access via B4293 to the east of the site.
Width	Approximately 5.5m
Speed limit	30mph
Street lighting	Yes
Crossing facilities	Dropped kerbs and tactile paving are located at the access junction with the B4293, and link with pedestrian footways on both sides of the carriageway
Bus Route	No
Character	Residential cul-de-sac with direct residential frontages on both sides of the carriageway.
On-street parking	No restrictions
B4293	
Description	Single carriageway rural distributor road which runs through Devauden, and provides connections from Monmouth, to the north, with Chepstow, to the south.
Width	Approximately 7m
Speed limit	60mph, reducing to 30mph through Devauden
Street lighting	Street lighting present along the footway, on the southern side of the carriageway, through Devauden.
Crossing facilities	Dropped kerbs and tactile paving located at priority junctions.
Bus Route	Yes
Character	Rural single carriageway with agricultural land on both sides of the carriageway. Through Devauden, there are direct residential frontages with some local amenities, including a convenience store, post office and a petrol filling station.
On-street parking	No restrictions

2.6 Personal injury collisions

2.6.1 Personal injury collision data has been obtained for the period 2016 to 2020 for the area around the site. The study area, which includes key routes and junctions surrounding the site, together with the location and severity of accidents that occurred within it, is shown in **Figure 2.5** below.

Figure 2.5 Location and severity of personal injury collisions

2.6.2 It can be seen from the figure above that there have been no collisions recorded through Devauden in the last five years.

2.6.3 There has been a total of two collisions along the B4293, one to the south of the site and another to the north, which both resulted in slight injuries being sustained. A summary of the collisions is set out below.

- One collision occurred on 28th August 2016, along the B4293 to the north of the site. This collision involved one vehicle and resulted in a child casualty sustaining slight injury; and,
- One collision occurred on 9th October 2016, along the B4293 to the south of the site. This collision involved a two vehicles and resulted in a total of two casualties sustaining slight injuries.

3 Access strategy

3.1.1 As outlined above, it is anticipated that, based on an average density of 35 dwellings per hectare, the candidate site is capable of accommodating up to 20 dwellings.

3.1.2 The concept block plan for the development site is shown in **Figure 3.1** below.

Figure 3.1 Concept block plan

3.2 Access arrangements

3.2.1 This section of the report outlines the proposed access strategy.

3.2.2 In order to access the candidate site, it is proposed to extend the existing cul-de-sac, which terminates at No.7/8 Churchfields, into the site.

3.2.3 The width of the cul-de-sac narrows at the western end, so it is proposed to narrow the access further and provide a priority one-way working section, with priority for vehicles accessing the site. The width of the carriageway through the narrowing is reduced to 3.2m, which is sufficient to accommodate the range of vehicles likely to access the site (including emergency vehicles).

3.2.4 Beyond the narrowing the width of the carriageway increases to 5.5m, which is wide enough to allow two Hgvs to pass.

3.2.5 The proposed access is shown in **Figure 3.2** below.

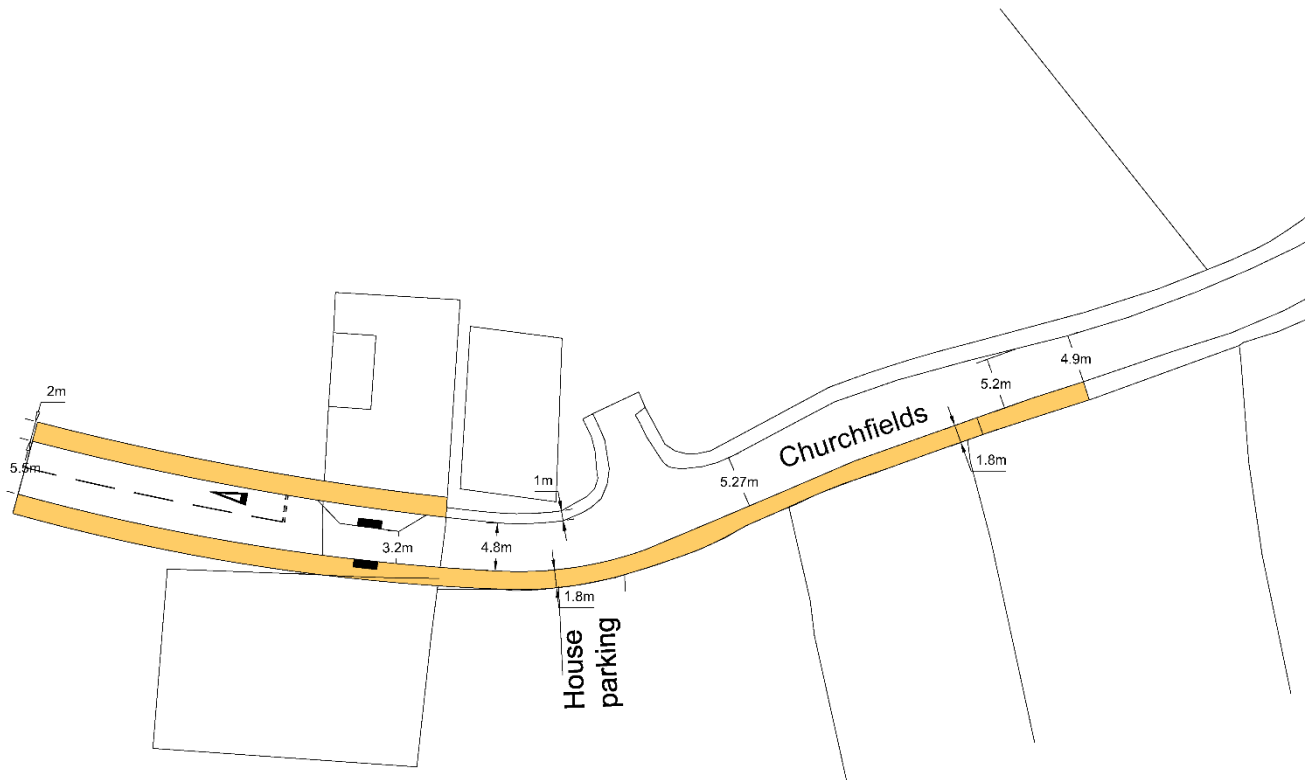

Figure 3.2 Proposed access arrangements on Churchfields

3.2.6 A swept path analysis has been undertaken for the range of vehicles likely to access the site (as set out in **Appendix A**) including:

- A medium sized car (based on a Volkswagen Touran);
- 10.5m refuse vehicle;
- 7.7m fire tender;
- 4.6 tonne light van; and,

- A 7.5 tonne box van.

3.2.7 The existing turning head had been retained, to enable vehicles to u-turn without entering the candidate site.

Pedestrians

3.2.8 Whilst there are limited facilities within walking distance of the site, there are a number of key pedestrian desire lines for residents of the development site, including local facilities and public transport along the B4293. Therefore, it is proposed to tie into the existing footway located along both sides of the carriageway through Churchfields, which connects to the footway along the southern side of the B4293.

4 Trip generation

4.1 Introduction

4.1.1 In order to assess the impact of a development of up to 20 dwellings on the existing transport infrastructure, it is necessary to assess the number of person trips (by mode) generated by the proposals. This section of the Transport Statement, therefore, outlines the methodology used to predict person trip generation.

4.2 Trip generation

4.2.1 The TRICS (v.7.8.1) trip generation database has been reviewed in order to predict the likely level of trips generated by the proposed development.

4.2.2 Sites have been selected based on the following parameters:

- Land use: Residential; Houses Privately Owned;
- Survey type: Multi-modal;
- Survey days: Monday-Friday;
- Number of dwellings selected: 10 to 984(units);
- Regions selected: Edge of town, Suburban area, Edge of town centre; and,
- Locations: All, excluding Central London, Northern Ireland and Republic of Ireland.

4.2.3 To provide a robust analysis of the likely trip generation of the proposed development based in relatively rural location, the 85th percentile trip rates have been used. The daily arrival and departure profile for these sites is set out in **Appendix B** and summarised in **Table 4.1** below.

Table 4.1 Trip generation: Privately Owned Houses

Time period	Arrival trip rate	No. of arrivals	Depart trip rate	No. of departs	Total trip rate	Total movements
Total persons						
8am–9am	0.255	5	1.196	24	1.451	29
5pm-6pm	0.788	16	0.35	7	1.138	23
7am-7pm	4.92	98	4.88	98	9.8	196
Pedestrians						
8am–9am	0.333	7	0.083	2	0.416	8
5pm-6pm	0.18	4	0.08	2	0.26	5
7am-7pm	1.314	26	1.357	27	2.671	53
Cyclists						
8am–9am	0	0	0.061	1	0.061	1
5pm-6pm	0.05	1	0	0	0.05	1
7am-7pm	0.153	3	0.167	3	0.32	6
Public transport users						
8am–9am	0.008	0	0.061	1	0.069	1
5pm-6pm	0.04	1	0.007	0	0.047	1
7am-7pm	0.229	5	0.222	4	0.451	9
Vehicles						
8am–9am	0.25	5	0.417	8	0.667	13
5pm-6pm	0.425	9	0.2	4	0.625	13
7am-7pm	2.644	53	2.739	55	5.383	108

4.2.4 It can be seen from the table above that the residential development of 20 dwellings could generate up to 13 vehicle movements (two-way) in the AM peak and up to 13 vehicle movements (two-way) in the PM peak period. It is likely that driving will be preferred mode of transport, contributing to 55% off all daily trips.

4.3 Assignment and distribution of development generated traffic

4.3.1 In order to assign the development generated traffic to likely key routes, the distribution of development generated traffic has been based on the 2011 Journey to Work census data for the Lower Super Output area in which the site is located.

4.3.2 Each destination has been assigned routes based on the most direct and appropriate direction of travel. The distribution of development generated traffic flows during the AM and PM peak is summarised in **Table 3.2** below.

Table 3.2 Distribution of development generated traffic

Route	Key destinations	% of traffic	AM peak		PM peak	
			Arrival	Depart	Arrival	Depart
North on B4293	Cwmbran, Hereford, Monmouth, Pontypool, Usk	23	1	2	2	1
South on B4293	Bristol, Gloucester, Newport, Cardiff,	77	4	6	7	3
			5	8	9	4

4.3.3 Based on the above, it is anticipated that the impact of the potential development will be minimal.

5 Summary and conclusions

5.1.1 Lime Transport has been commissioned by Monmouthshire Housing Association (MHA) to prepare an access appraisal in support of a candidate site submission for residential development on land at Churchfields, Devauden, Monmouthshire.

5.2 Likely travel characteristics

5.2.1 It is anticipated that the development site could accommodate up to 20 residential dwellings, which could generate up to 13 vehicle movements (two-way) in the morning peak period, 13 vehicle movements (two-way) in the evening peak period, and up to 108 vehicle movements (two-way) throughout the day.

5.3 Access strategy

5.3.1 In order to access the potential development, it is proposed to extend the existing cul-de-sac, which terminates at No.7/8 Churchfields, into the site.

5.3.2 The width of the cul-de-sac narrows at the western end, so it is proposed to narrow the access further and provide a priority one-way working section, with priority for vehicles accessing the site. The width of the carriageway through the narrowing is reduced to 3.2m, which is sufficient to accommodate the range of vehicles likely to access the site (including emergency vehicles).

5.3.3 Also, as part of the potential development, a pedestrian footway will be provided to tie into the existing footway located along both sides of the carriageway through Churchfields, which connects to the footway along the southern side of the B4293. This provides connections to the majority of facilities within the vicinity of the site, including public transport infrastructure.

5.4 Conclusions

5.4.1 It is considered that the proposed development of three flats does not have an unacceptable impact on highway safety, the residual cumulative impacts can be accommodated on the road network and are not severe.

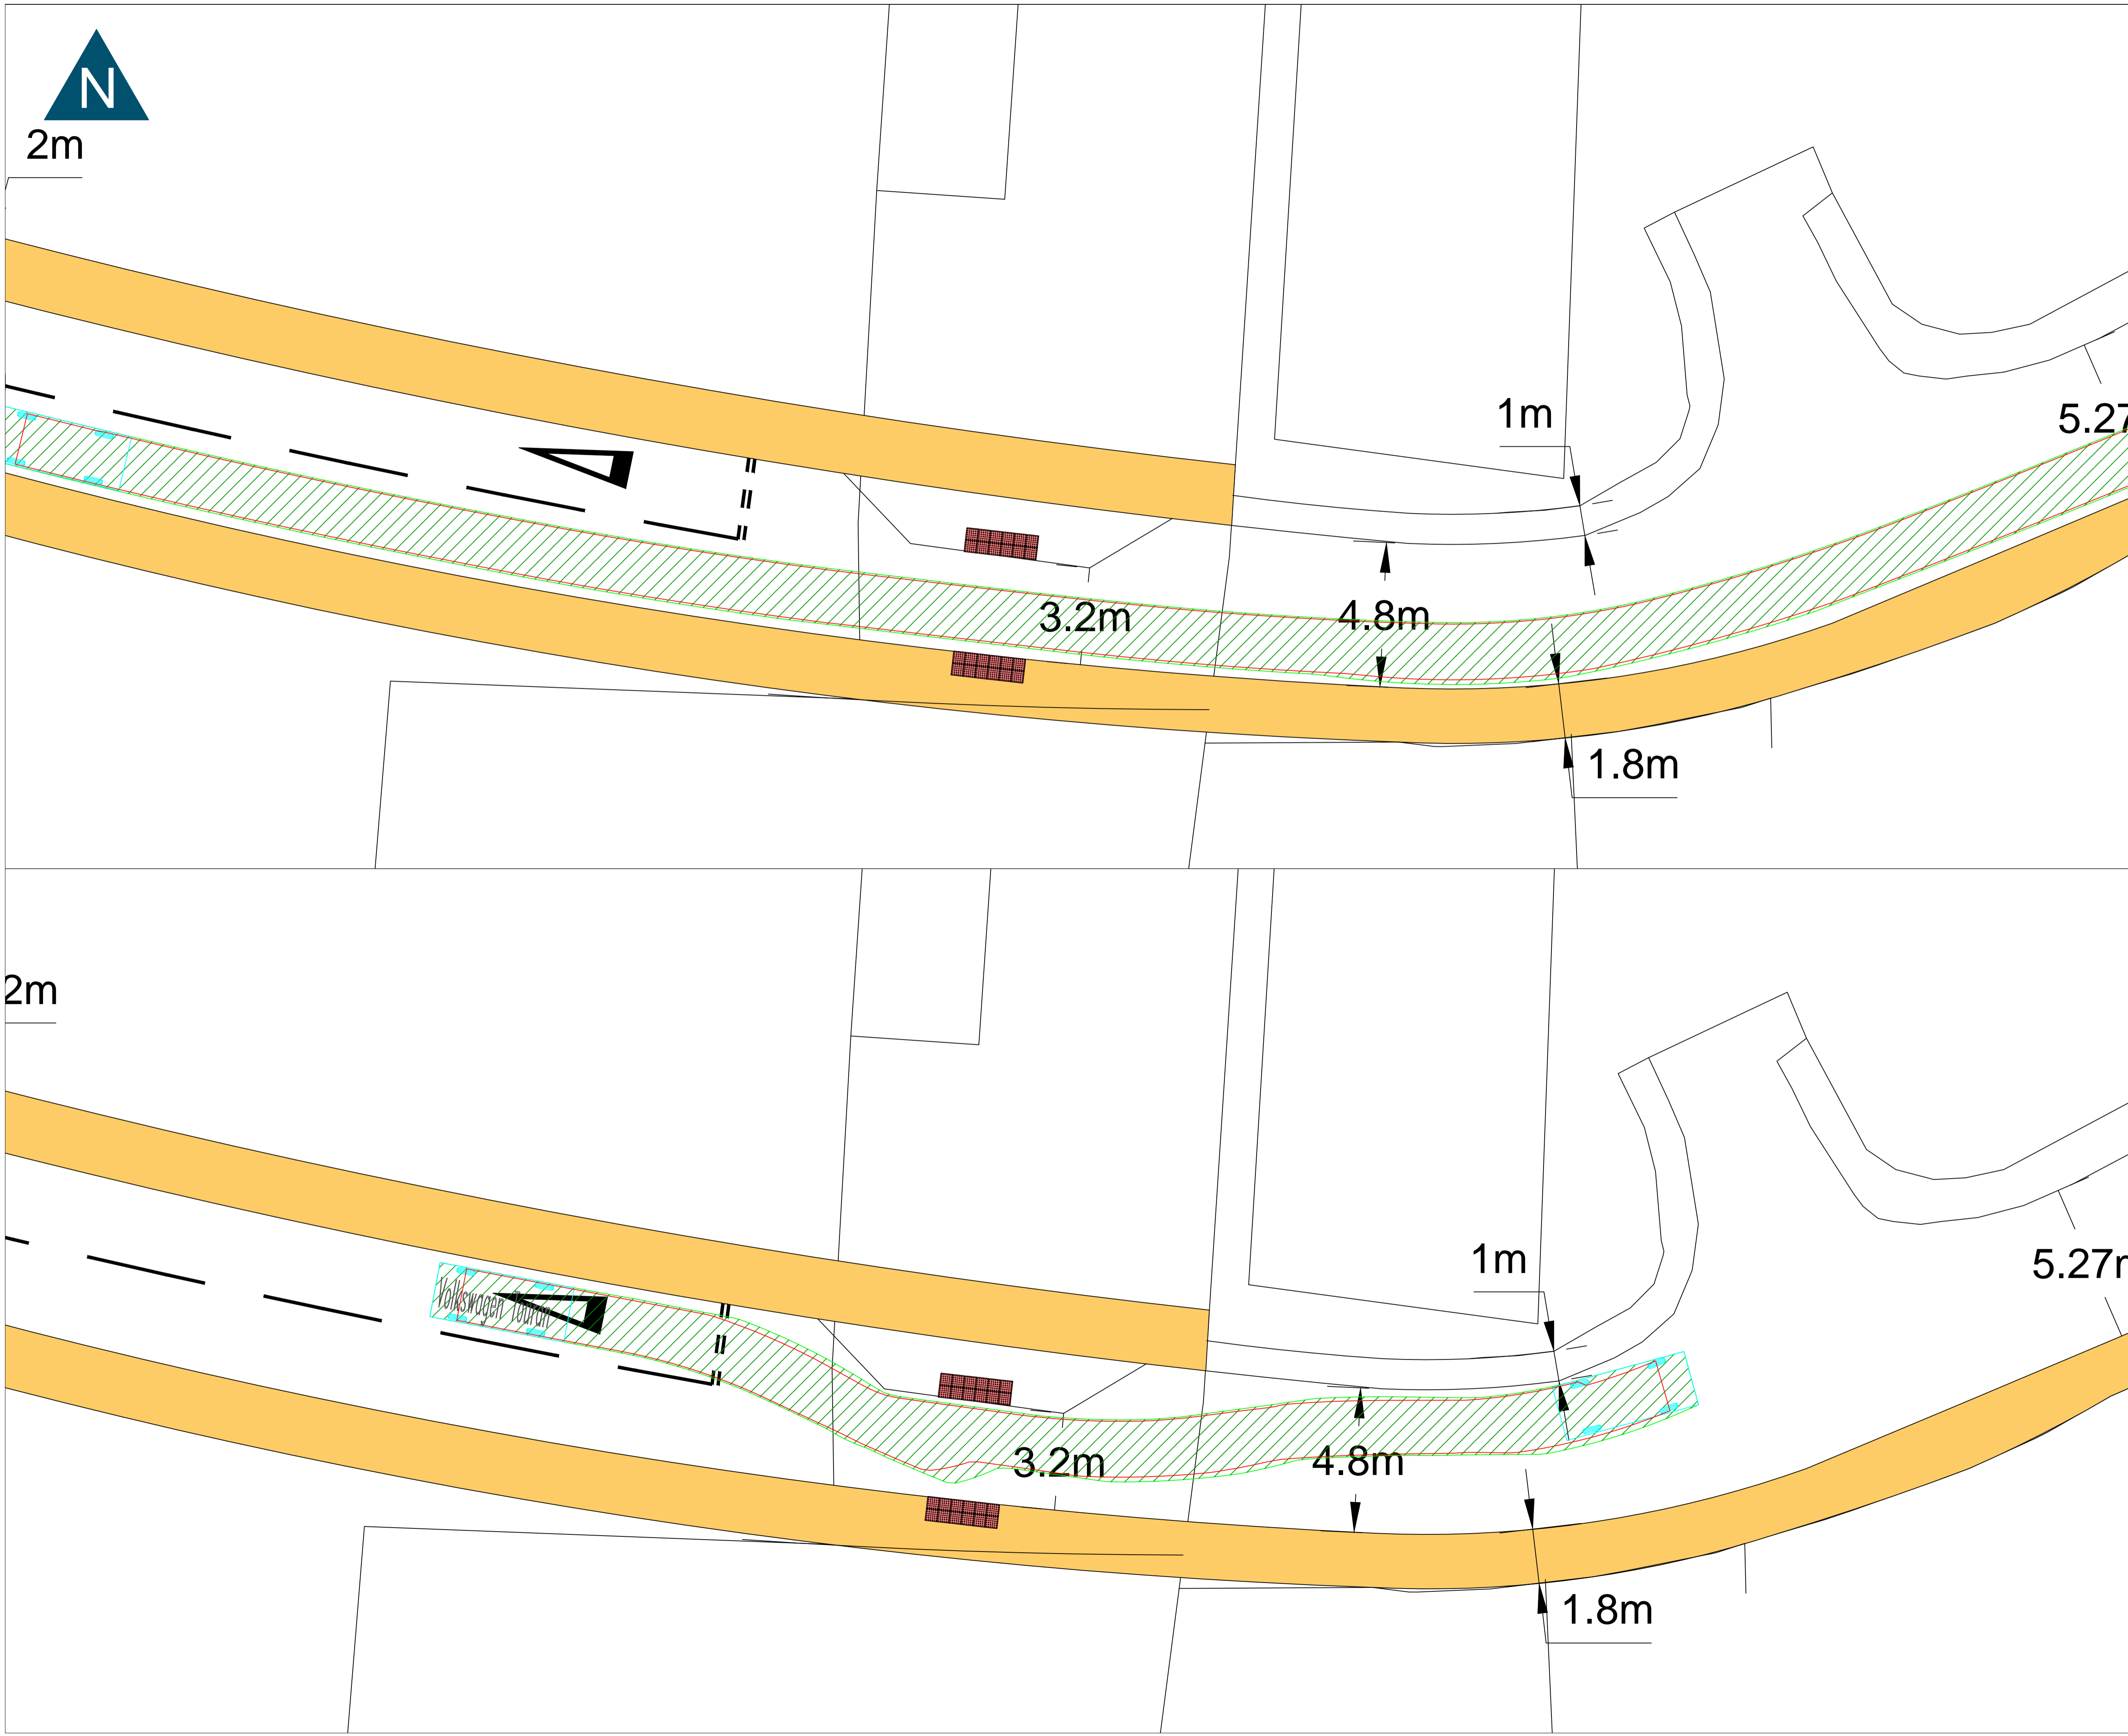

5.4.2 Furthermore, any impact can be further reduced by the design measures highlighted, including generous cycle parking and a residential travel plan.

	FA FALKIRK	2 days
	HI HIGHLAND	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: No of Dwellings
 Actual Range: 10 to 984 (units:)
 Range Selected by User: 6 to 1817 (units:)

Parking Spaces Range: All Surveys Included

Parking Spaces per Dwelling Range: All Surveys Included

Bedrooms per Dwelling Range: All Surveys Included

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/13 to 08/10/20

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	13 days
Tuesday	11 days
Wednesday	13 days
Thursday	11 days
Friday	4 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	52 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

Edge of Town Centre	4
Suburban Area (PPS6 Out of Centre)	15
Edge of Town	33

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	50
No Sub Category	2

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

C3	52 days
----	---------

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:

All Surveys Included

Population within 1 mile:

1,000 or Less	1 days
1,001 to 5,000	5 days
5,001 to 10,000	13 days
10,001 to 15,000	18 days
15,001 to 20,000	10 days
20,001 to 25,000	5 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	11 days
25,001 to 50,000	4 days
50,001 to 75,000	9 days
75,001 to 100,000	12 days
100,001 to 125,000	2 days
125,001 to 250,000	14 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0	13 days
1.1 to 1.5	37 days
1.6 to 2.0	2 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Yes	16 days
No	36 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	52 days
-----------------	---------

This data displays the number of selected surveys with PTAL Ratings.

This section displays actual (not average) trip rates for each of the survey days in the selected set, and ranks them in order of relative trip rate intensity, for a given time period (or peak period irrespective of time) selected by the user. The count type and direction are both displayed just above the table, along with the rows within the table representing the 85th and 15th percentile trip rate figures (highlighted in bold within the table itself).

The table itself displays details of each individual survey, alongside arrivals, departures and totals trip rates, sorted by whichever of the three directional options has been chosen by the user. As with the preceding trip rate calculation results table, the trip rates shown are per the calculation factor (e.g. per 100m² GFA, per employee, per hectare, etc). Note that if the peak period option has been selected (as opposed to a specific chosen time period), the peak period for each individual survey day in the table is also displayed.

This section displays actual (not average) trip rates for each of the survey days in the selected set, and ranks them in order of relative trip rate intensity, for a given time period (or peak period irrespective of time) selected by the user. The count type and direction are both displayed just above the table, along with the rows within the table representing the 85th and 15th percentile trip rate figures (highlighted in bold within the table itself).

The table itself displays details of each individual survey, alongside arrivals, departures and totals trip rates, sorted by whichever of the three directional options has been chosen by the user. As with the preceding trip rate calculation results table, the trip rates shown are per the calculation factor (e.g. per 100m² GFA, per employee, per hectare, etc). Note that if the peak period option has been selected (as opposed to a specific chosen time period), the peak period for each individual survey day in the table is also displayed.

This section displays actual (not average) trip rates for each of the survey days in the selected set, and ranks them in order of relative trip rate intensity, for a given time period (or peak period irrespective of time) selected by the user. The count type and direction are both displayed just above the table, along with the rows within the table representing the 85th and 15th percentile trip rate figures (highlighted in bold within the table itself).

The table itself displays details of each individual survey, alongside arrivals, departures and totals trip rates, sorted by whichever of the three directional options has been chosen by the user. As with the preceding trip rate calculation results table, the trip rates shown are per the calculation factor (e.g. per 100m² GFA, per employee, per hectare, etc). Note that if the peak period option has been selected (as opposed to a specific chosen time period), the peak period for each individual survey day in the table is also displayed.

This section displays actual (not average) trip rates for each of the survey days in the selected set, and ranks them in order of relative trip rate intensity, for a given time period (or peak period irrespective of time) selected by the user. The count type and direction are both displayed just above the table, along with the rows within the table representing the 85th and 15th percentile trip rate figures (highlighted in bold within the table itself).

The table itself displays details of each individual survey, alongside arrivals, departures and totals trip rates, sorted by whichever of the three directional options has been chosen by the user. As with the preceding trip rate calculation results table, the trip rates shown are per the calculation factor (e.g. per 100m² GFA, per employee, per hectare, etc). Note that if the peak period option has been selected (as opposed to a specific chosen time period), the peak period for each individual survey day in the table is also displayed.

This section displays actual (not average) trip rates for each of the survey days in the selected set, and ranks them in order of relative trip rate intensity, for a given time period (or peak period irrespective of time) selected by the user. The count type and direction are both displayed just above the table, along with the rows within the table representing the 85th and 15th percentile trip rate figures (highlighted in bold within the table itself).

The table itself displays details of each individual survey, alongside arrivals, departures and totals trip rates, sorted by whichever of the three directional options has been chosen by the user. As with the preceding trip rate calculation results table, the trip rates shown are per the calculation factor (e.g. per 100m² GFA, per employee, per hectare, etc). Note that if the peak period option has been selected (as opposed to a specific chosen time period), the peak period for each individual survey day in the table is also displayed.

This section displays actual (not average) trip rates for each of the survey days in the selected set, and ranks them in order of relative trip rate intensity, for a given time period (or peak period irrespective of time) selected by the user. The count type and direction are both displayed just above the table, along with the rows within the table representing the 85th and 15th percentile trip rate figures (highlighted in bold within the table itself).

The table itself displays details of each individual survey, alongside arrivals, departures and totals trip rates, sorted by whichever of the three directional options has been chosen by the user. As with the preceding trip rate calculation results table, the trip rates shown are per the calculation factor (e.g. per 100m² GFA, per employee, per hectare, etc). Note that if the peak period option has been selected (as opposed to a specific chosen time period), the peak period for each individual survey day in the table is also displayed.

This section displays actual (not average) trip rates for each of the survey days in the selected set, and ranks them in order of relative trip rate intensity, for a given time period (or peak period irrespective of time) selected by the user. The count type and direction are both displayed just above the table, along with the rows within the table representing the 85th and 15th percentile trip rate figures (highlighted in bold within the table itself).

The table itself displays details of each individual survey, alongside arrivals, departures and totals trip rates, sorted by whichever of the three directional options has been chosen by the user. As with the preceding trip rate calculation results table, the trip rates shown are per the calculation factor (e.g. per 100m² GFA, per employee, per hectare, etc). Note that if the peak period option has been selected (as opposed to a specific chosen time period), the peak period for each individual survey day in the table is also displayed.

This section displays actual (not average) trip rates for each of the survey days in the selected set, and ranks them in order of relative trip rate intensity, for a given time period (or peak period irrespective of time) selected by the user. The count type and direction are both displayed just above the table, along with the rows within the table representing the 85th and 15th percentile trip rate figures (highlighted in bold within the table itself).

The table itself displays details of each individual survey, alongside arrivals, departures and totals trip rates, sorted by whichever of the three directional options has been chosen by the user. As with the preceding trip rate calculation results table, the trip rates shown are per the calculation factor (e.g. per 100m² GFA, per employee, per hectare, etc). Note that if the peak period option has been selected (as opposed to a specific chosen time period), the peak period for each individual survey day in the table is also displayed.
